

Criterion E

Client Overview and Feedback:

Success Criteria Number	Detail	Outcome
1.	Students must be able to register and create a login for themselves through the application and it must be stored in the database.	Met - Users can create accounts for themselves and register using the Create Account Page and use the credentials they created to log into the application.
2.	Once login is successful, the program leads to the Main Frame, which contains tabs for all the different options.	Met - When the correct credentials are presented, the MainFrame page appears with the tabs for respective navigation.
3.	The Home Tab must contain photos that can be altered by admin and admin announcements must be displayed to students.	Met - On the left side, there are photos and users can navigate through them using the buttons below. Admins can add photos to the respective folder. On the right-side, admin announcements are displayed.
4.	The Document Tab contains links to all the documents as well as a place where users can submit their completed documents.	Met - All the documents with their respective links are on the left, and athletes can upload the completed documents on the right.
5.	The Sign Up Page shows the Track schedule and a place for students to only sign up for regular meets.	Met - Students can see the track schedule on the left and students can sign up for their own events but only for regular meets. Invitational meets do not show up in the option menu.
6.	The Results Page shows all the results from the meets that the administrator enters	Met - A text box shows the results of that specific athlete on the results page.
7.	Administrators can also	Met - It is very similar to the

	create logins for themselves.	login system of the student side and administrators can also create their own credentials to log in.
8.	Once login is completed, it leads to the administrator MainFrame which holds tabs for creating announcements, signing up athletes, and posting results.	Met - Administrators can create announcements, sign up athletes for both regular and invitational meets, and post results once a meet has concluded.

Overall, my client really enjoyed the product as it definitely made the tedious task of registering and storing athletes a lot easier. The application met all of the client's requirements which the client was very happy for. After some discussion about the features in the application, we decided that some extensions can be added in the future.

1. Option Menu for names
 - a. Instead of entering the names itself, there would be an option of names who registered on the administrator side. This would make posting results for each athlete even easier for administrators.
2. Adding a live chat system
 - a. Communication between students is very important to build good team chemistry with the athletes themselves. Adding a live chat in the application itself where students can chat with each other can boost teammate chemistry and school spirit.
